AI-AUGMENTED BACKEND DEVELOPMENT
AI BLOGNEST API
PHASE 1 – BRAINSTORMING & IDEATION

ROLE	TEAM MEMBERS
TEAM LEADER	Anisha.P
TEAM MEMBER	Bavani.C
TEAM MEMBER	Hemalatha.S

Submitted as a phase - wise project submission.

1. Introduction

The Brainstorming and Ideation phase is the initial stage of the AI BlogNest API project. In this phase, the project idea, purpose, target users, major requirements and possible features are identified. The main concept is to develop a backend API for a blog application with AI-assisted features.

2. Problem Identification

Traditional blog applications require users to manually create, organize and manage content. Developers also need separate backend services for users, posts and other operations. A centralized backend API with AI assistance can simplify blog management and provide structured communication between clients and the backend.

3. Proposed Idea

Develop an AI-augmented backend system called AI BlogNest API.

- Provide REST API endpoints for blog content management.
- Manage users, posts, categories, comments and related information.
- Use AI assistance for content generation and summarization.
- Provide a structured backend that can connect with client applications.

4. Main Objectives

- Design an organized backend architecture for a blog application.
- Create reliable API endpoints for content management.
- Reduce repetitive work through AI-assisted functionality.
- Provide data validation, error handling and security.
- Create a backend that can be tested and integrated with different clients.

5. Key Features Identified

- User and blog content management.
- CRUD operations for blog posts.
- API-based communication.
- AI-assisted content functionality.
- Database integration.
- Validation, error handling and security considerations.

6. Expected Outcome

The project idea and its major requirements are clearly identified, providing a foundation for architecture, setup, development, database configuration and testing.

7. Conclusion

This phase establishes the basic direction of AI BlogNest API and converts the initial concept into a clear project idea with defined objectives and expected features.
